CI/CD Pipeline using AWS

This project demonstrates a complete CI/CD pipeline using AWS services.

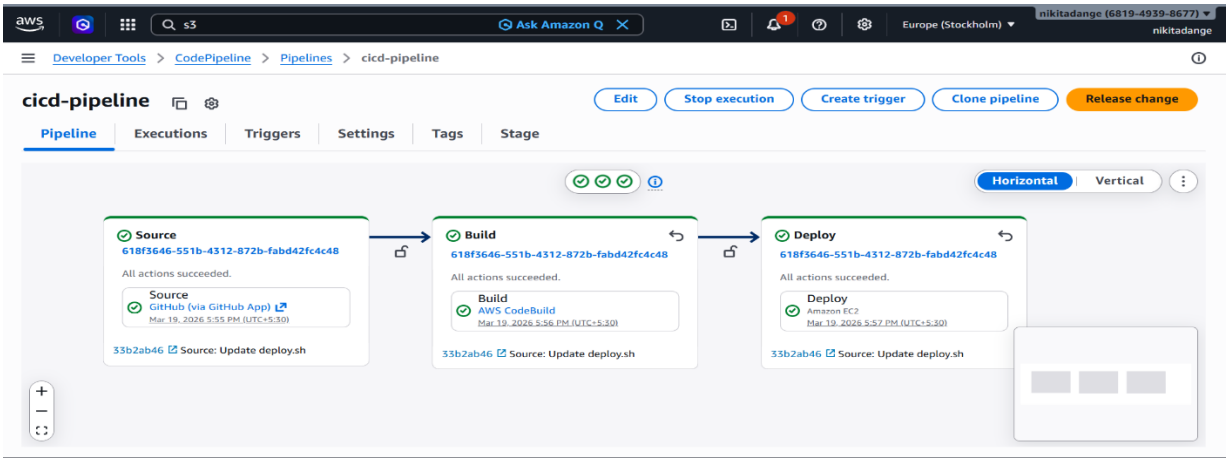
It automates the build and deployment process.

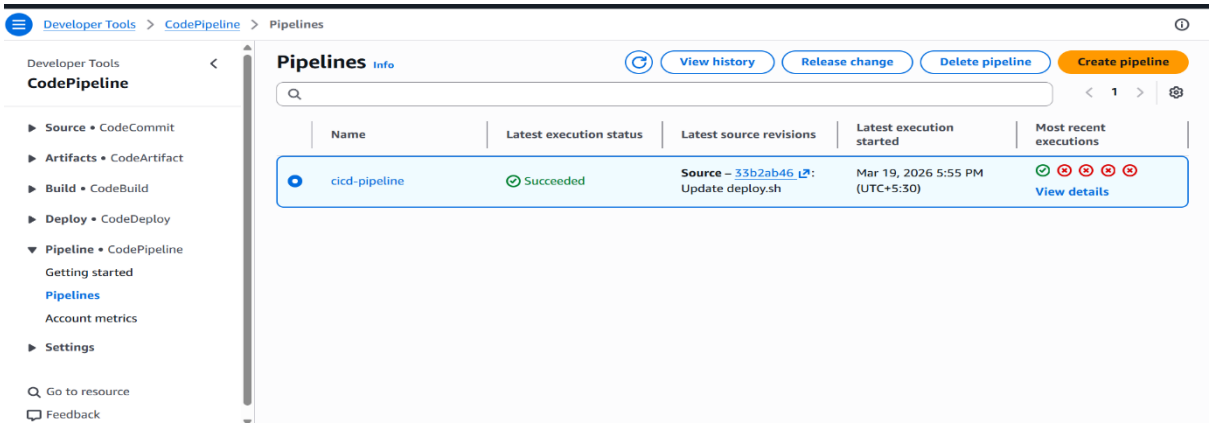
GitHub → CodePipeline → CodeBuild → CodeDeploy → EC2

1]Output

Final application output displayed successfully in the browser.

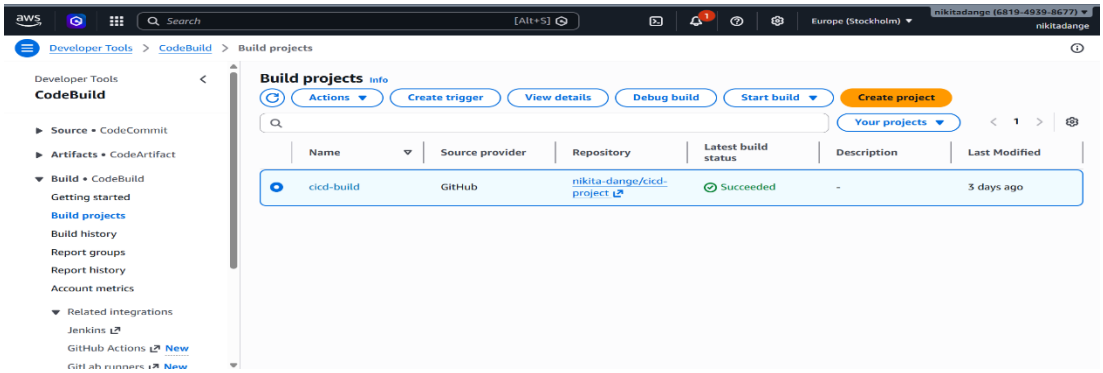
2]Pipeline





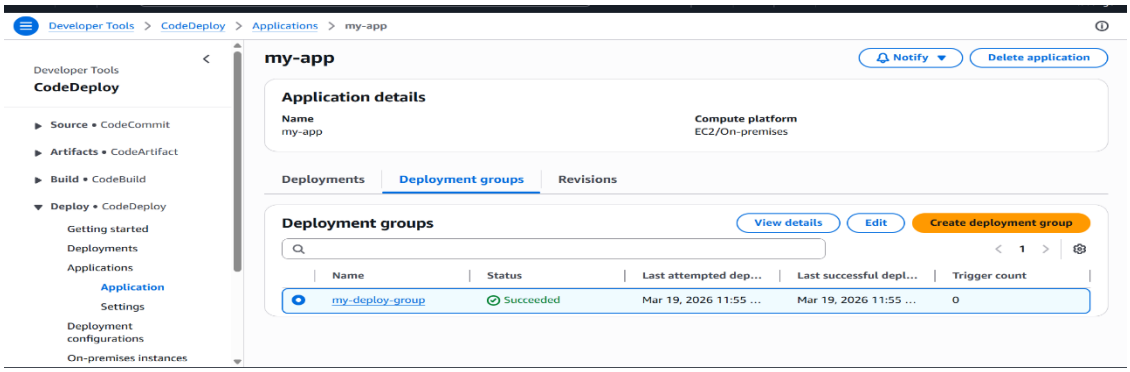
Pipeline executed successfully with all stages completed.

3]Build



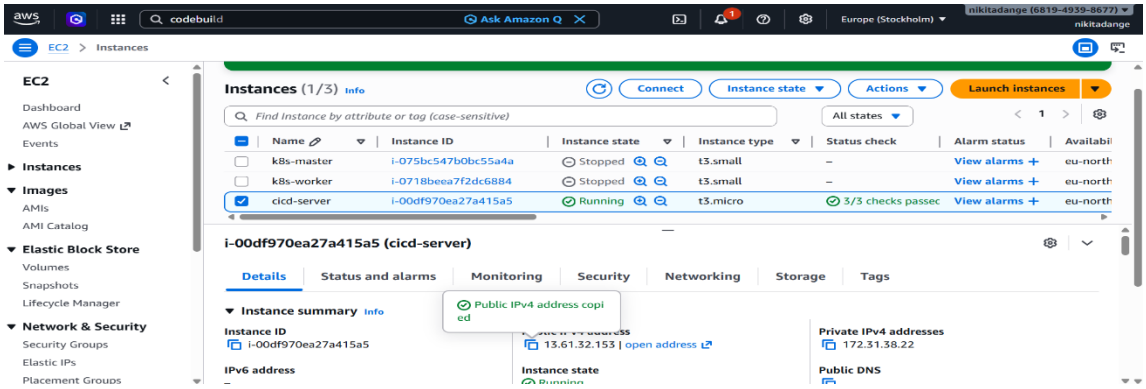
Application build completed successfully using AWS CodeBuild.

4]Deploy



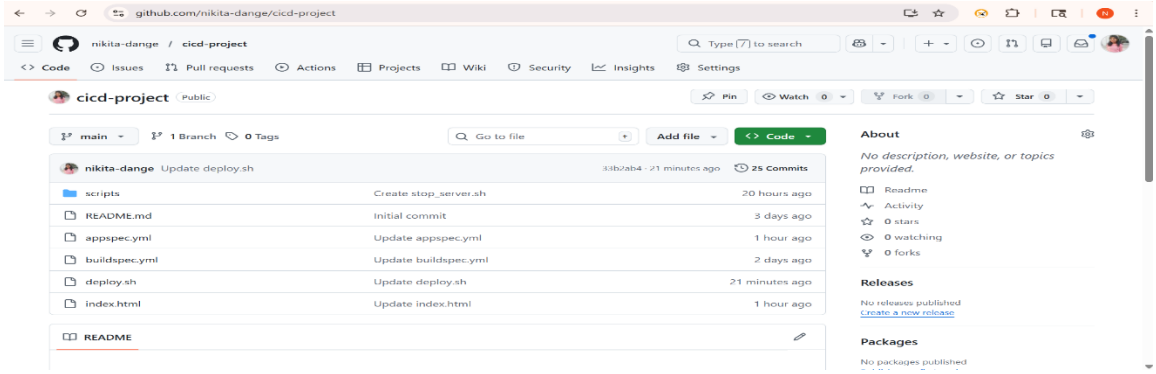
Application deployed successfully using AWS CodeDeploy.

5]EC2



Application is hosted on Amazon EC2 instance.

6]GitHub



Source code is stored and managed using GitHub.
